

Payroll

Employees expect accurate, on-time paychecks. But today's work environment requires an often confusing array of pay structures, from per diems to piecework. Multiple pay structures and deductions can sometimes be challenging, but you can count on the AddonSoftware Payroll application to satisfy your complex requirements with a flexible, easy-to-use payroll processing solution.

A flexible design allows you to define an unlimited number of earnings, deductions, taxes, and employer contributions of almost any type: 401(k) deferrals, bonuses, piece rates, and all the standard earnings types. Each employee can have taxes and employee contributions for multiple states and localities.

Because you define pay deduction and tax codes, it's easy to design your own payroll reports, using the Payroll report generator. Each column lays out like a spreadsheet; you simply determine the headings and the contents of each.

- Automatic sick/vacation accrual
- Maintain your own tax tables
- Flexible pay codes
- Multiple tax locations
- Flexible deduction capabilities
- Security levels and passwords provide complete payroll confidentiality
- Alphanumeric employee numbers are supported
